

PERFORMANCE TESTING

EDUGENIE – AI-POWERED LEARNING ASSISTANT

TEST APPROACH

Performance is considered at the application workflow level:

1. startup time;
2. request routing;
3. model/service processing;
4. response display.

IMPORTANT DEPENDENCY

Gemini-based response time can vary with network connectivity and external AI service conditions.

LOCAL MODEL CONSIDERATION

LaMini-Flan-T5-783M requires local memory and processing resources. Performance therefore depends on the computer used to run the model.

OBSERVATION AREAS

1. FastAPI startup.
2. Frontend response after submission.
3. AI generation completion.
4. Browser rendering of generated content.
5. Stability during repeated feature use.

The project documentation does not provide numerical benchmark measurements, so no unsupported timing values are stated here.
