

EDUGENIE – AI-POWERED LEARNING ASSISTANT

RESULTS

The documented EduGenie implementation brings multiple learning-assistance functions into one application.

1. The application provides a web interface for learning tools.
2. Question answering is supported using Gemini 3.5 Flash.
3. Concept explanation is supported using LaMini-Flan-T5-783M.
4. Quiz generation is supported using Gemini 3.5 Flash.
5. Text summarization is supported using Gemini 3.5 Flash.
6. Learning path generation is supported using Gemini 3.5 Flash.
7. FastAPI provides the central backend communication layer.
8. The project separates learning functions into individual modules.
9. HTML and CSS are used for the frontend.
10. Environment variables are used for Gemini API configuration.
11. The project provides a foundation for future features such as voice interaction, multilingual learning, mobile support, progress tracking, gamification, adaptive learning, group learning, teacher/parent dashboards, LMS integration, image/PDF processing, and notifications.
